**The Memento User Manual is a serie of documents established to achieve two goals:**

**- to provide, to every person involved in a scientific project in Memento, a global overview of the protocole, the nature of the data, the different questionnaires, scales, and tests used in Memento, and the way they were collected**

**-to give information to statisticians regarding the different datasets available, their structures, and to provide some advice**

**We encourage the reader to refer to the Memento User's Manual as much as needed.**

**This User's Manual is divided into the 6 following parts:**

Part 1. The Memento protocole summary	Information on the context, objectives, design, etc... of Memento
Part 2. The Access to data and Publication Charter	Considerations on data access and publication process
Part 3. Annotated Case Report Form	All the questionnaires, scales, and neuropsychological tests completed by the clinical sites, through the online electronic case report form (the French version is available)
Part 4. Instruction booklet	A comprehensive instruction guide for the questionnaires, scales, and neuropsychological tests used (The French version is available)
Part 5. Datasets and statistical considerations	The list of all the datasets and helpful complementary information on data
Part 6. Datasets structure, formats	A comprehensive list of all the datasets, variables and formats of the Memento database
